AI Agent Studio demo. 26A.

Agent Team of type “Worflow”.

Navigate to custom Redwood Visual Builder page (SaaS related) from chat.

Introduction/Goal.

Deep links are an important feature in AI Agent Studio, but what can we do if we want to navigate to other pages?

In this demonstration we will show how to navigate dynamically to different pages from SaaS, to learn we have prepared 2 examples, provided code for both.

With this approach you can use standard Deep Links for SaaS and also custom URLs.

Preparatory steps.

Import provided Redwood Visual Builder application in your OIC instance.

Set up the backend connection for your available SaaS, stage and publish the application.

After publishing, get the URL for the live application and keep it at hand.

Disclaimer.

Visual Builder setup and details of how the form has been built is outside the scope of the demo.

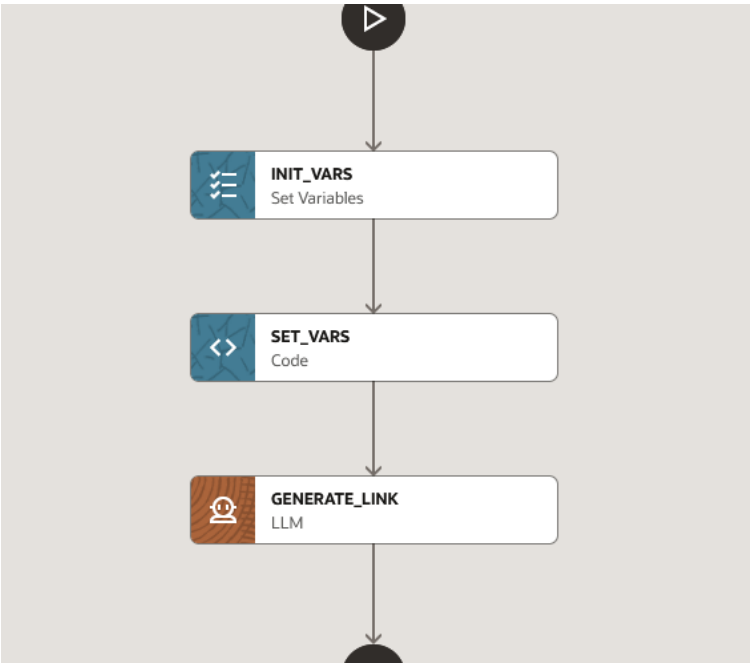
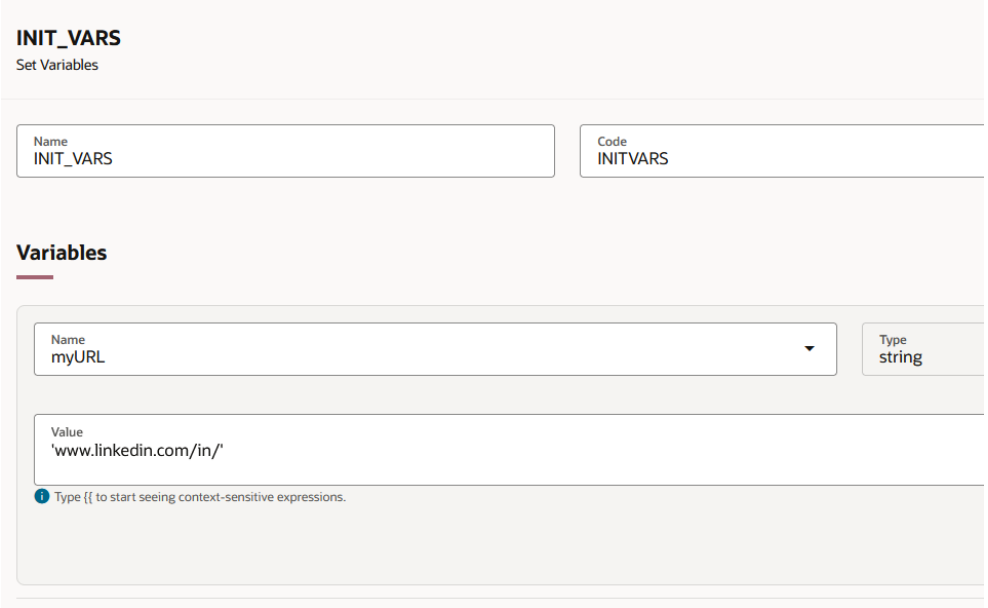
Example 1.

Basic example to navigate to your LinkedIn page.



Node init_vars.



Node set_vars.

SET_VARS

Code

Name
SET_VARS

Code
SETVARS

Return Type
String

Source Code

```
let varCompleteURL= $context.$variables.myURL +$context.$triggers.REST.$input.targetName;

return varCompleteURL;
```

Node Generate_link.

GENERATE_LINK

LLM

Name
GENERATE_LINK

Code
GENERATELINK

Prompt
Generate a Plain HTML link using content of string variable {{$context.$nodes.SETVARS.$output.result}}
Provide the generated HTML link to the user to navigate, prefix the link with the text "Here you have your link:"

Type {{ to start seeing context-sensitive expressions.

Output

Output Builder Mode

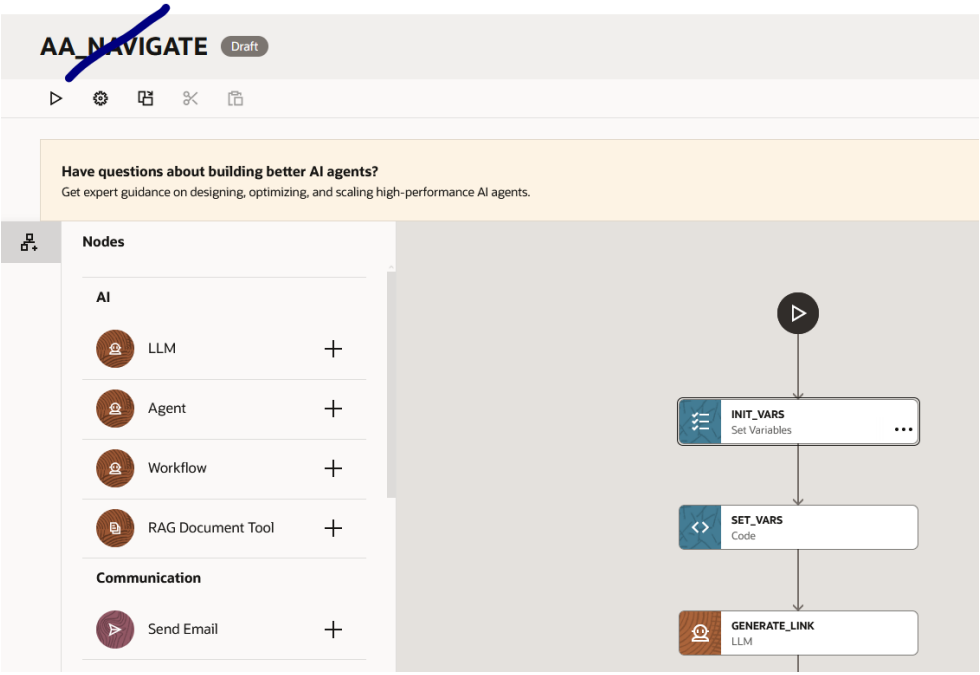
Specification Mode Simple Mode

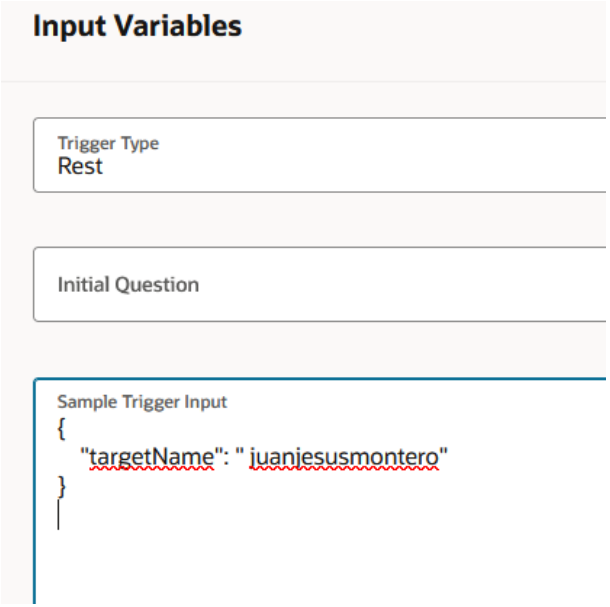
Properties

Test 1.

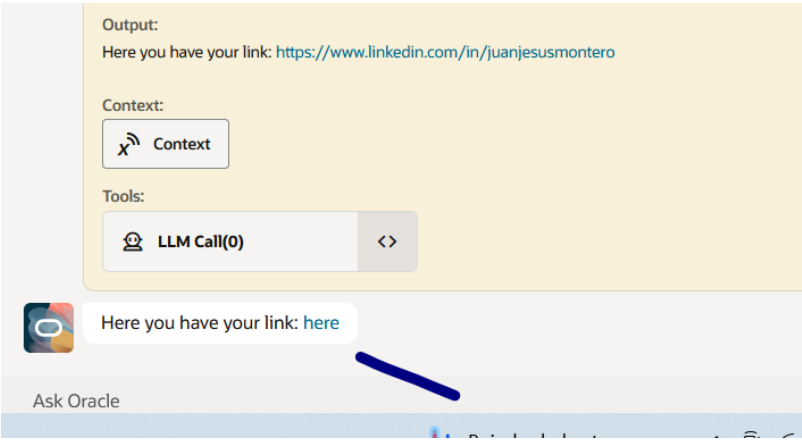
Payload.

```
{
  "targetName": " juanjesusmontero"
}
```





Input Variables
Trigger Type
Rest
Initial Question
Sample Trigger Input
{
"targetName": " juanjesusmontero"
}



Output:
Here you have your link: https://www.linkedin.com/in/juanjesusmontero

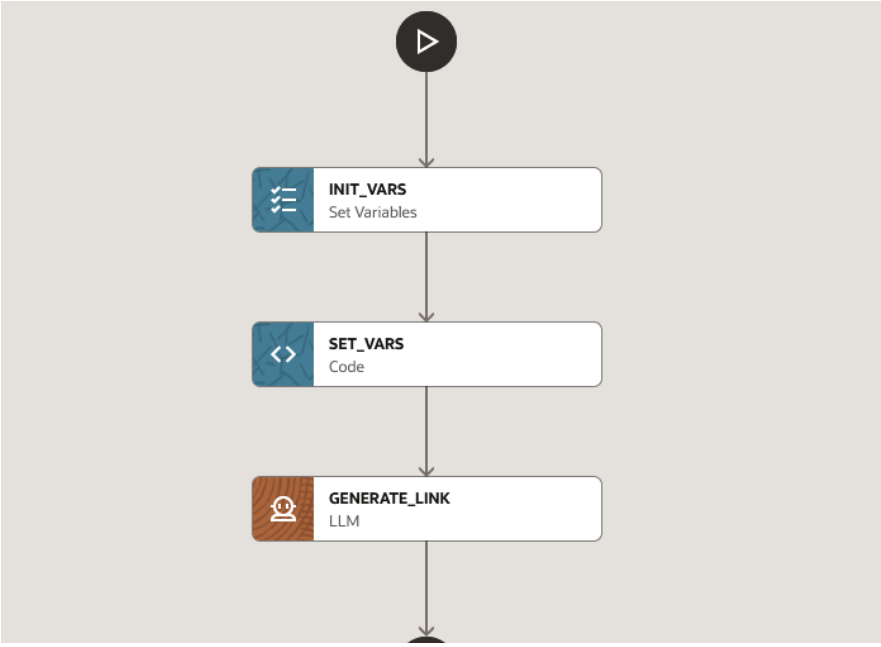
Example 2.

Basically, the same but adapted to navigate to our Redwood VB page.

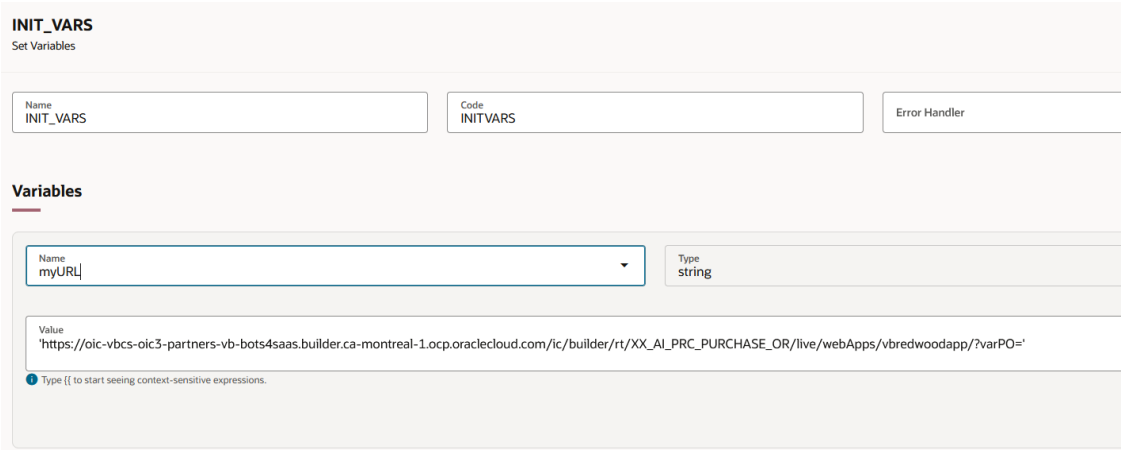
This would be our target URL after publishing the VB application.

https://oic-vbcs-oic3-partners-vb-xxxx.builder.ca-montreal-1.ocp.oraclecloud.com/ic/builder/rt/XX_AI_PRC_PURCHASE_OR/live/webApps/vbredwoodapp/?varPO=55629

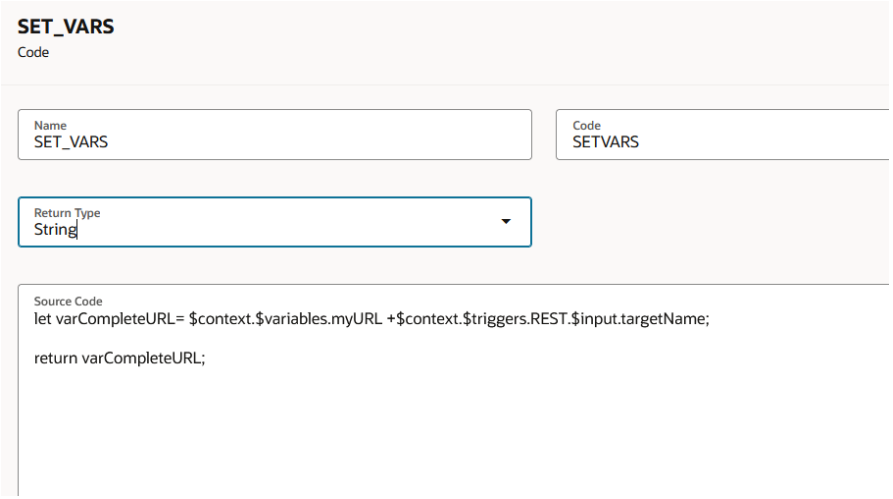
Overview.



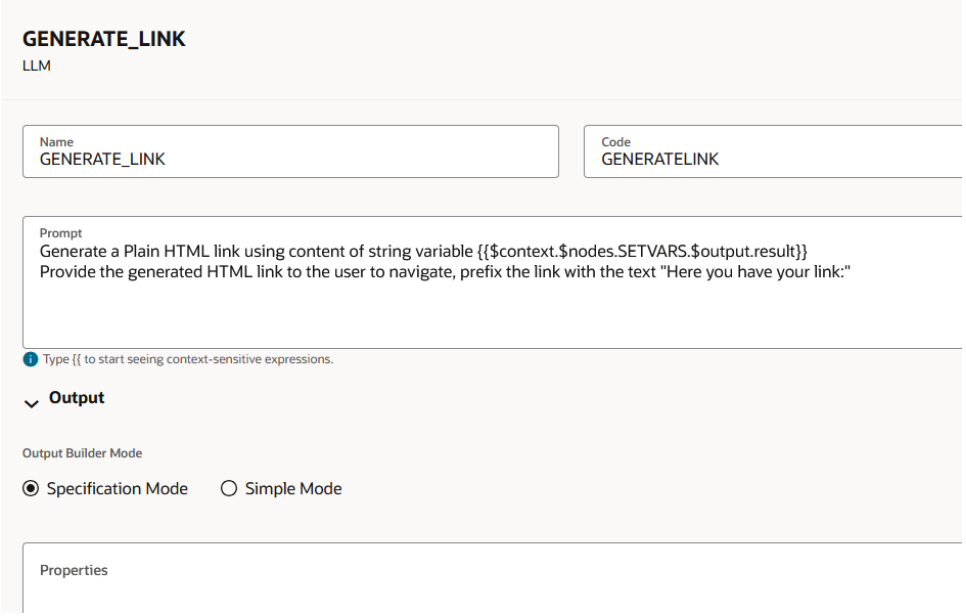
Init_vars node.



Set_Vars node



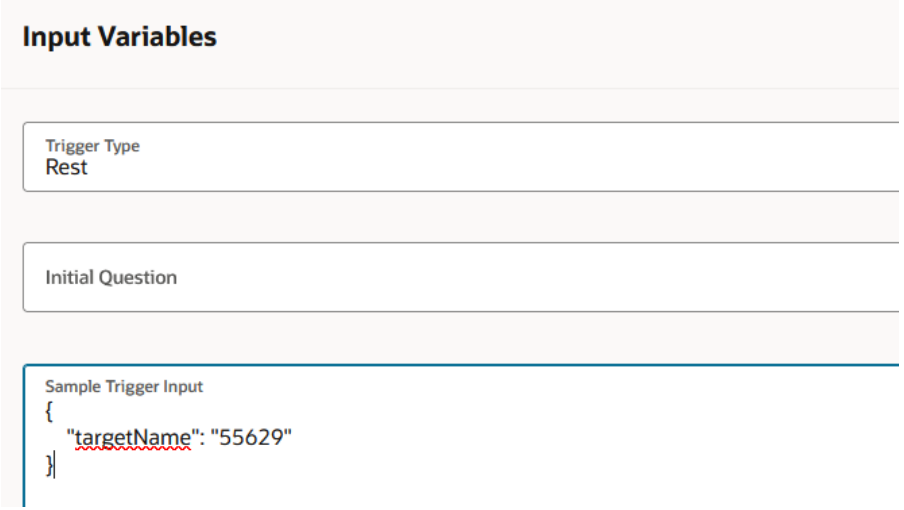
Node Generate_link.



Test 2.

Payload.

```
{
  "targetName": "55629"
}
```



Output:
Here you have your link:
https://oic-vbcs-oic3-partners-vb-bots4saas.builder.ca-montreal-1.ocp.oraclecloud.com/ic/builder/rt/XX_AI_PRC_PURCHASE_OR/live/webApps/vbredwoodapp/?varPO=55629
