AI Agent Studio. 26A+.

MCP Tool for Oracle Integration.

OCI setup+OIC setup+AI Agent Setup. COMPLEX STUFF.

Introduction/Goal.

This document will explain how to connect AI Agent Studio using OIC MCP Server step by step.

We have used these references:

- https://www.youtube.com/watch?v=7kjH0uXyUAI
- https://www.youtube.com/watch?v=1BM_tgwb8fc
- https://k21academy.com/oracle/granting-instance-access-in-oic-integration-3-user-access-guide

Important: for this exercise you will need access to OCI console+OIC instance.

Connecting AI Agent studio to use OIC resources is possible using tool of type REST, but MCP has clear advantages, it is outside the scope of this document explain in detail these advantages.

In our case we will have a dummy integration, but in real scenarios you could have a complete set of integrations in project to complete a set of activities.

Think of reusing OIC integrations to apply AI concepts quickly without big efforts.

Disclaimer: no guarantee provided, no support provided.

Preparatory Steps.

Part 1. Oracle Integration OIC.

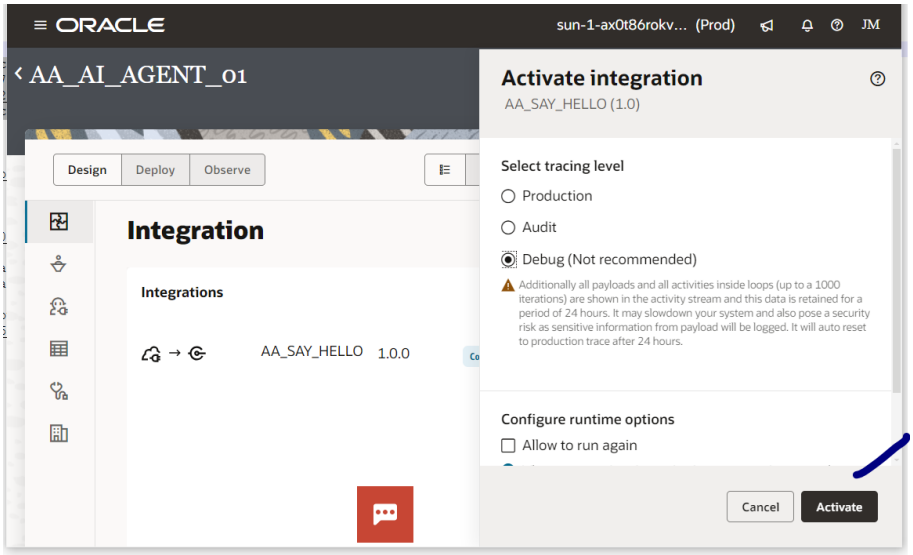
For OIC developers, it is not valid as a simple integration or package with integrations.

You will need a project.

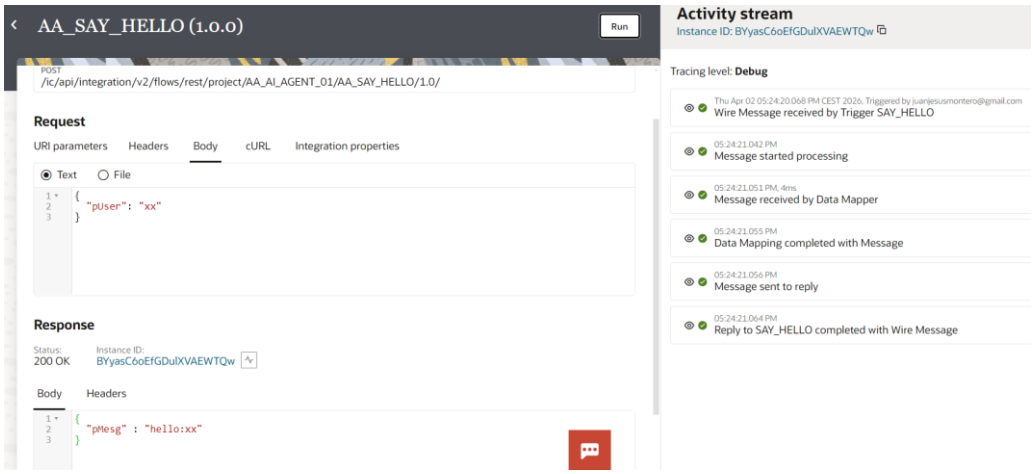
Create yours, then create…a dummy integration that receives a parameter and returns a greeting message.

Think small first, then get more complex stuff.

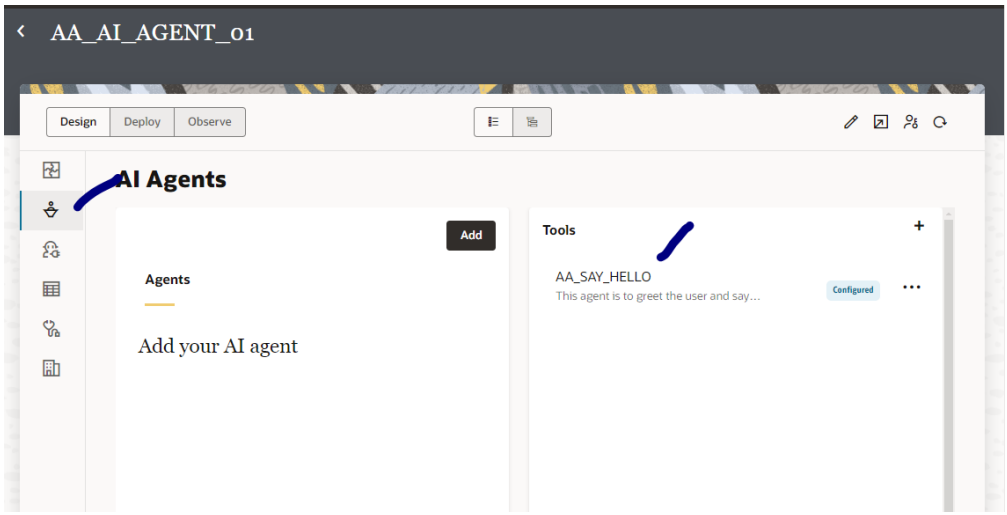
Your integration must be activated.

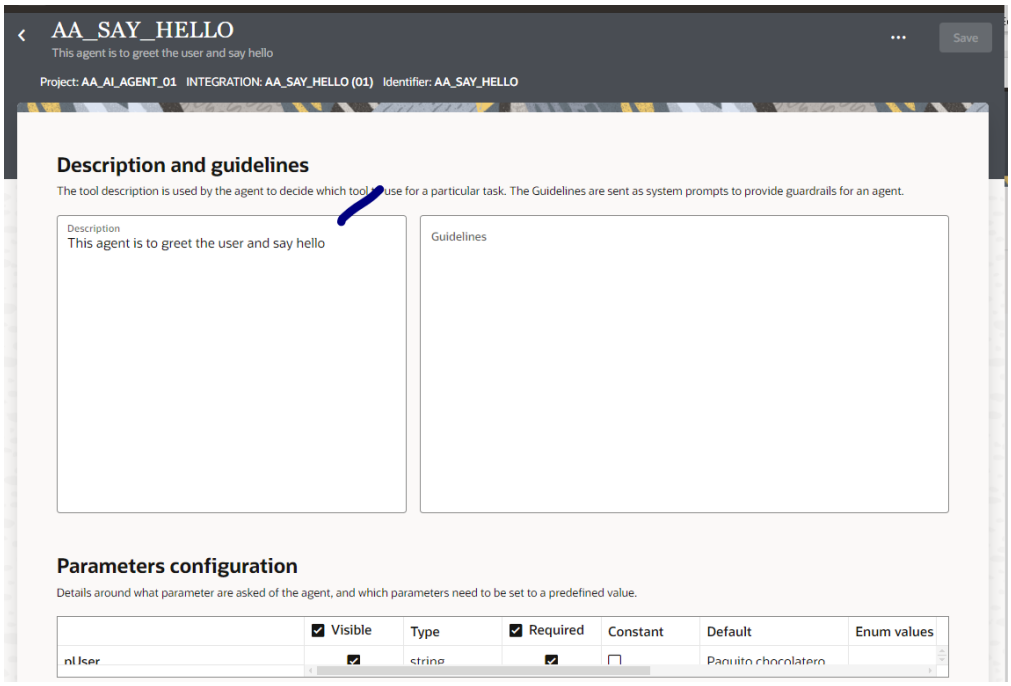


Then quick test.

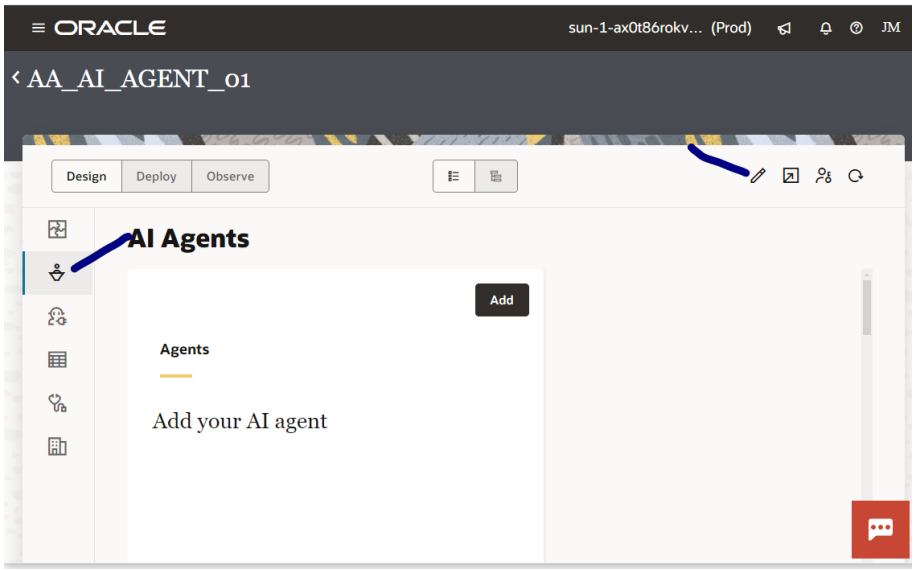


Then it is needed to create a Tool to setup later in AI Agent Studio.

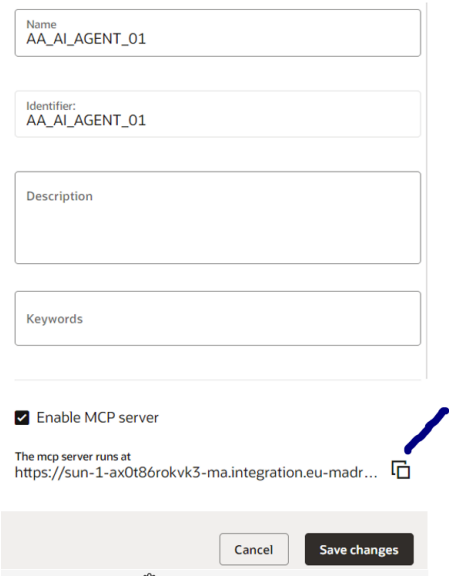




After saving, get the instance URL to use in AI Agent Studio from project details, first select as shown in screenshot.



Then you can get your URL here:



Put URL aside and store it in some notepad.

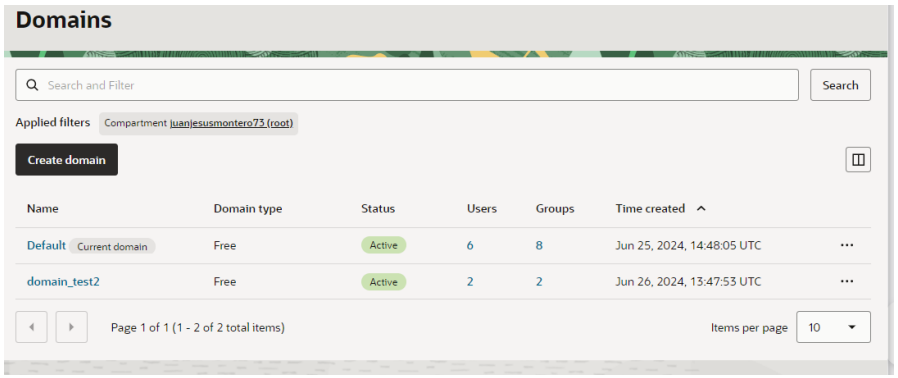
https://sun-1-ax0t86rokvk3-ma.integration.eu-madrid-1.ocp.oraclecloud.com/mcp-server/v1/projects/AA_AI_AGENT_01/mcp

PART 2. OCI.

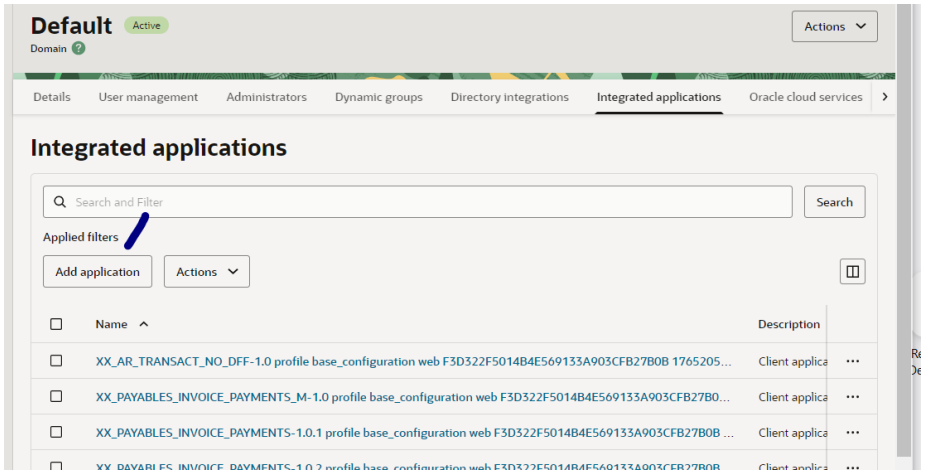
Log in to OCI Console → console.oracle.com

Go to ☰ Menu → Identity & Security → Domains

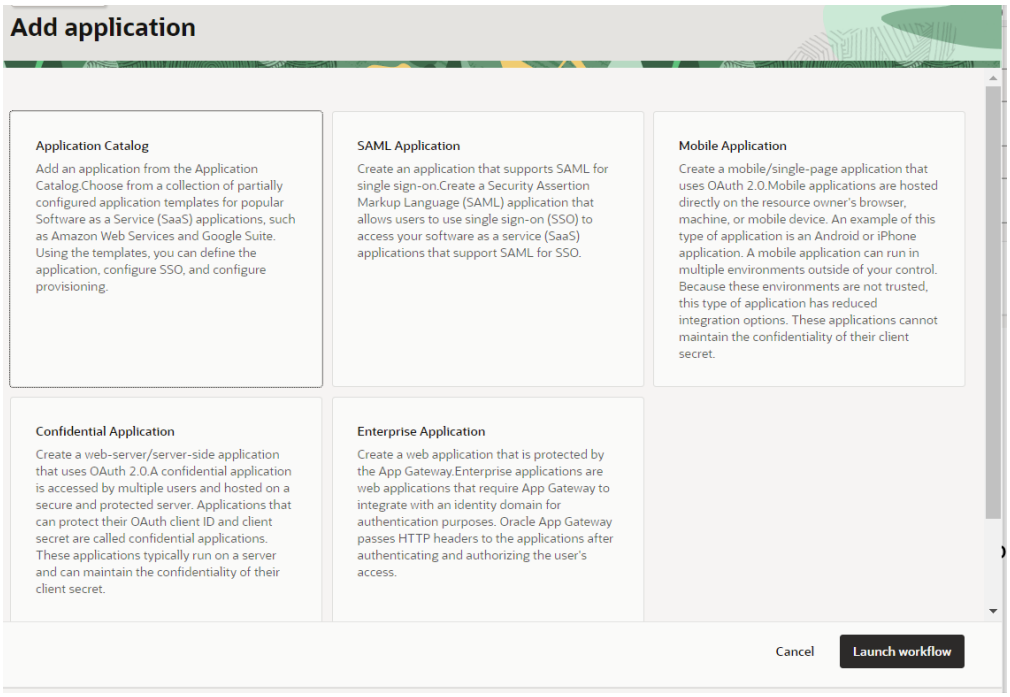
Select your domain (usually Default)



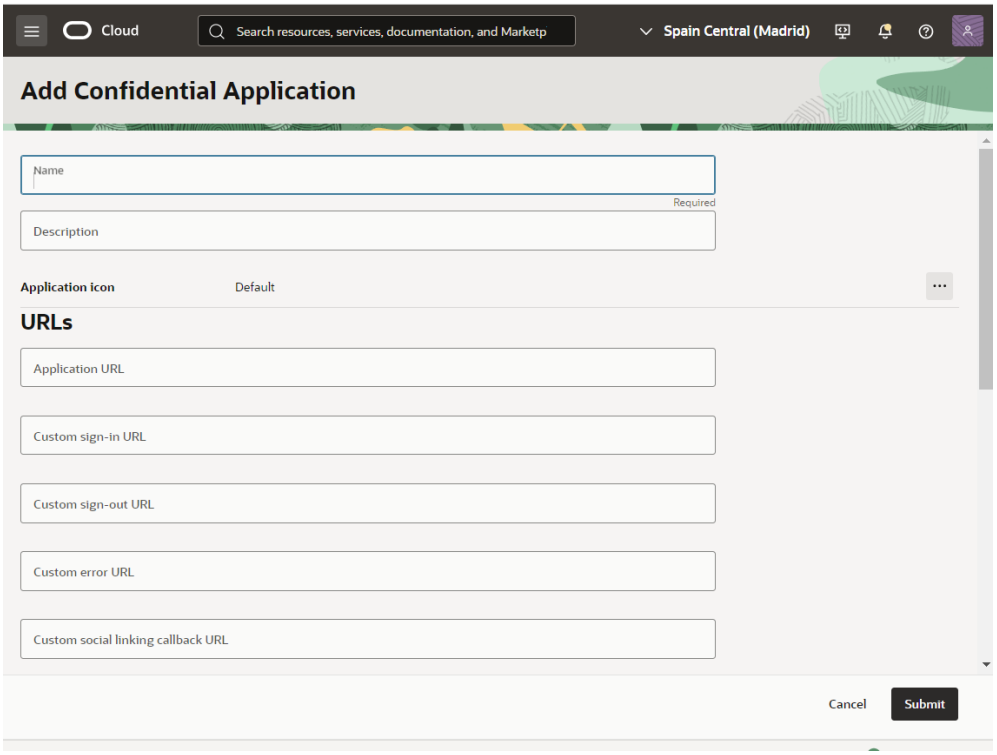
Click Integrated Applications, then click Add Application.



Select Confidential Application from the dialog.

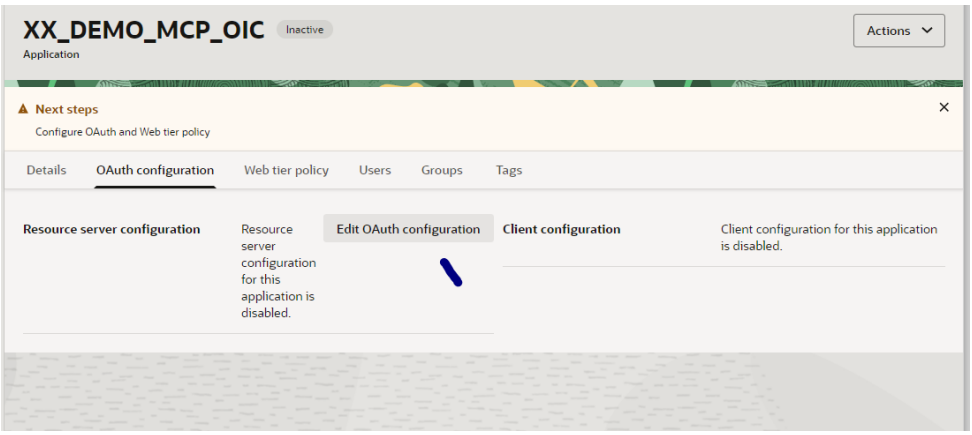


Click Launch Workflow

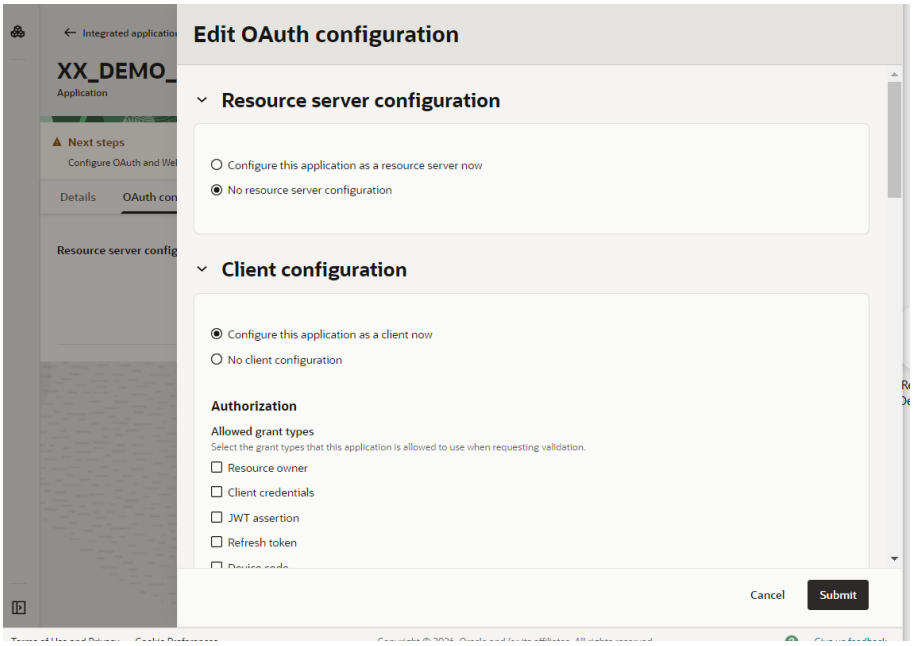


Give it a name, click Submit

Select OAuth Configuration, click Edit OAuth Configuration button.

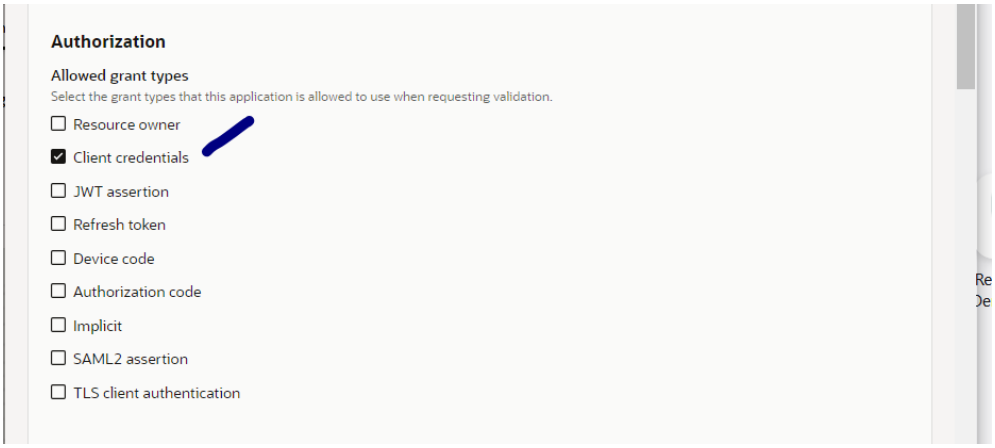


Check Configure this application as a client.

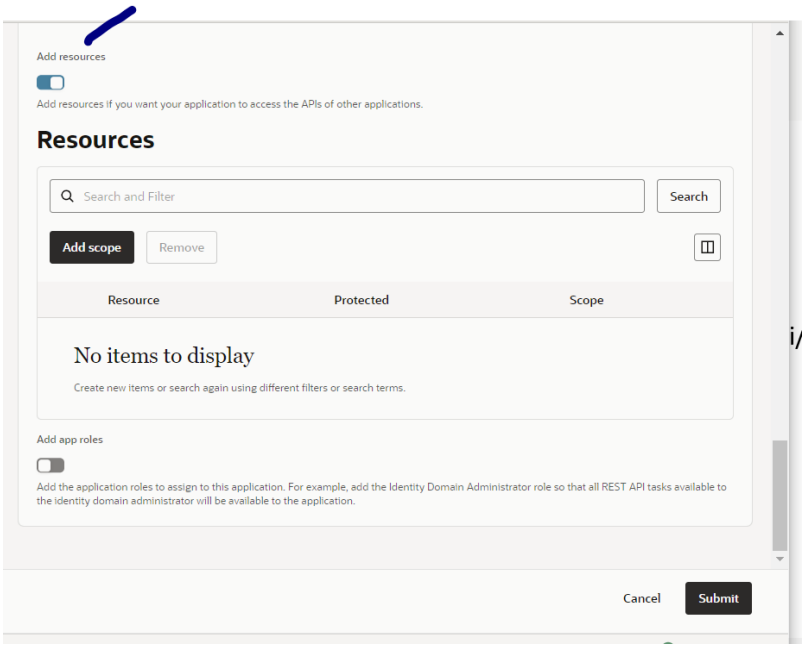


Under Allowed Grant Types, check:

* Client Credentials

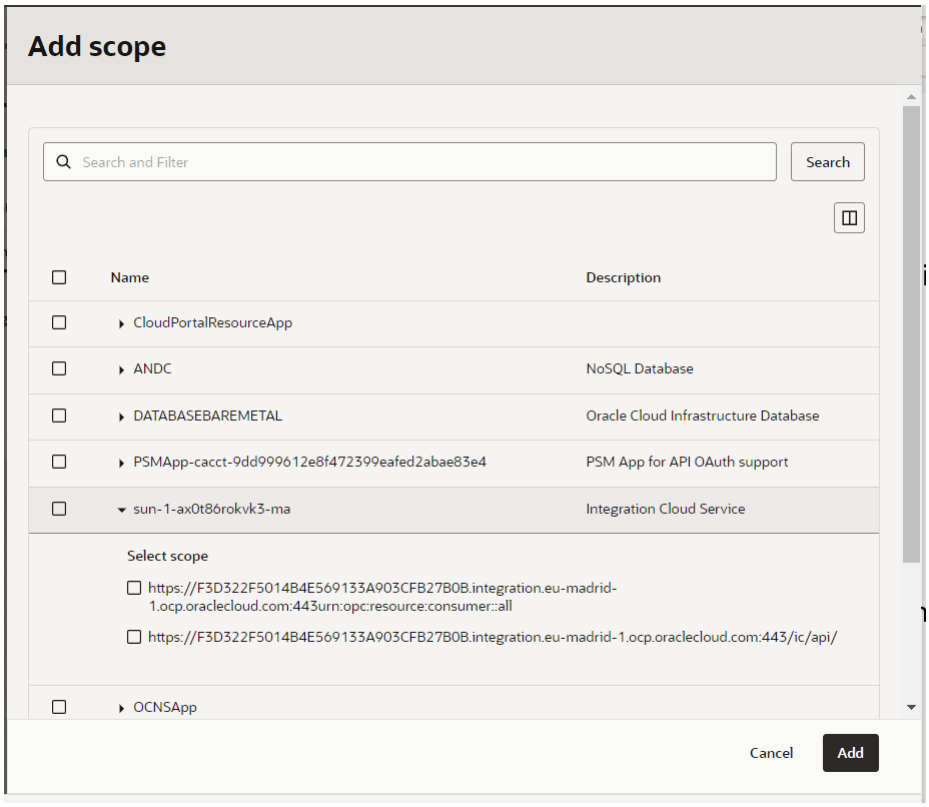


Add the OIC resource under Resources:



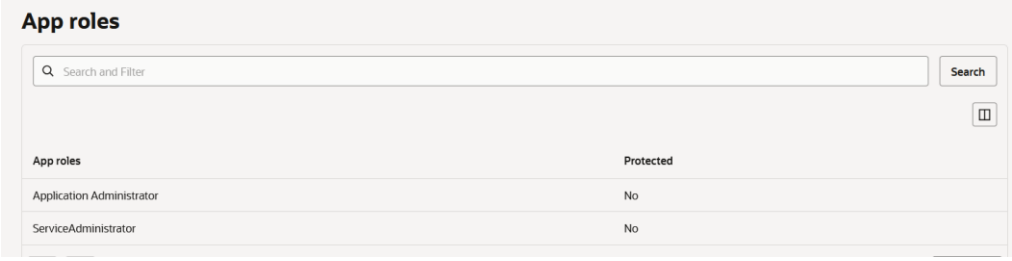
* Click Add Scope

* Search for your OIC instance and select as shown.



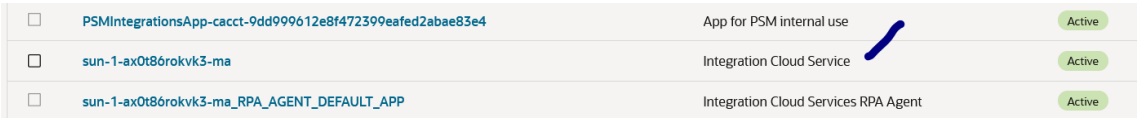
Select BOTH and click Next.

Now we have selected these roles, but no from this page.

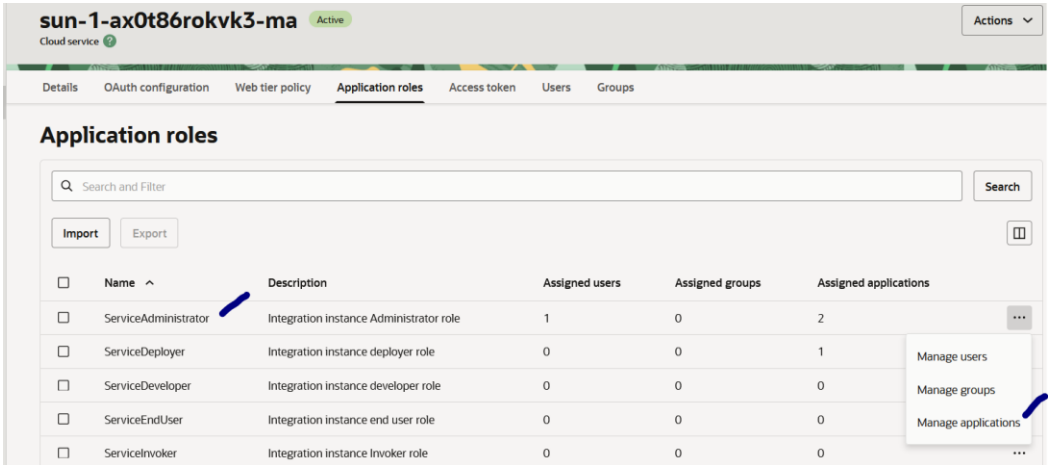


To set up roles, we have done from:

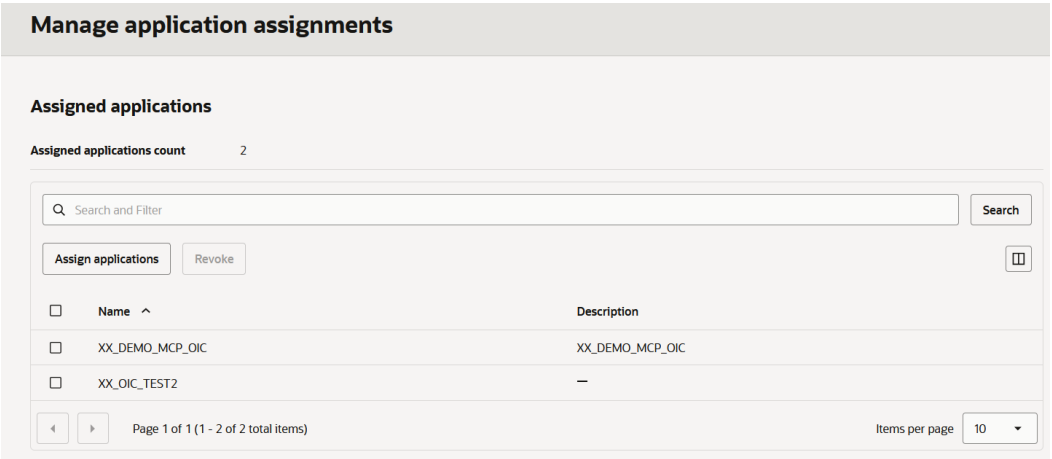
Menu-Domains-select your domain-select Oracle Cloud Services-Select OIC as shown.



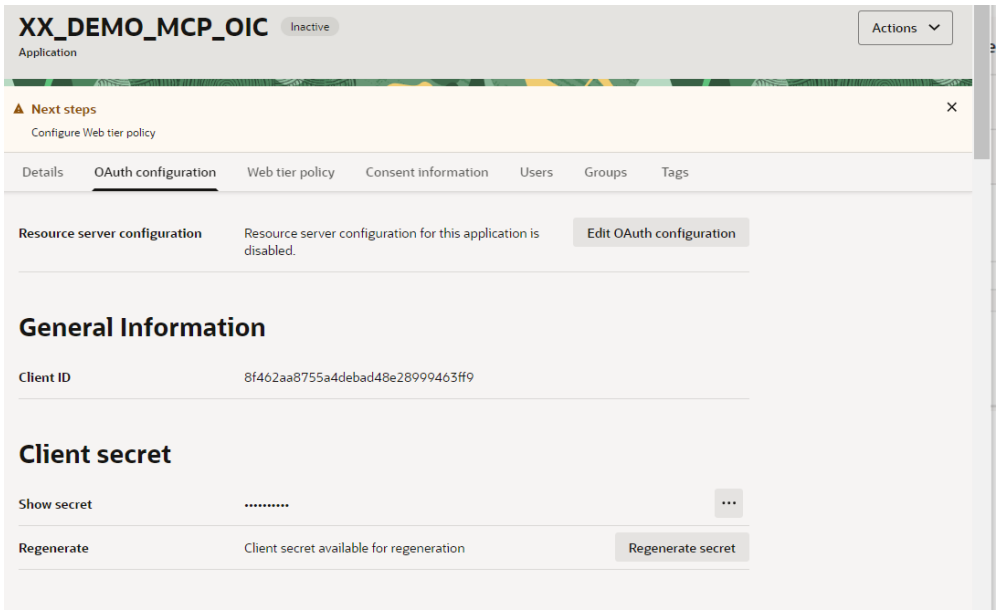
Now select as shown:



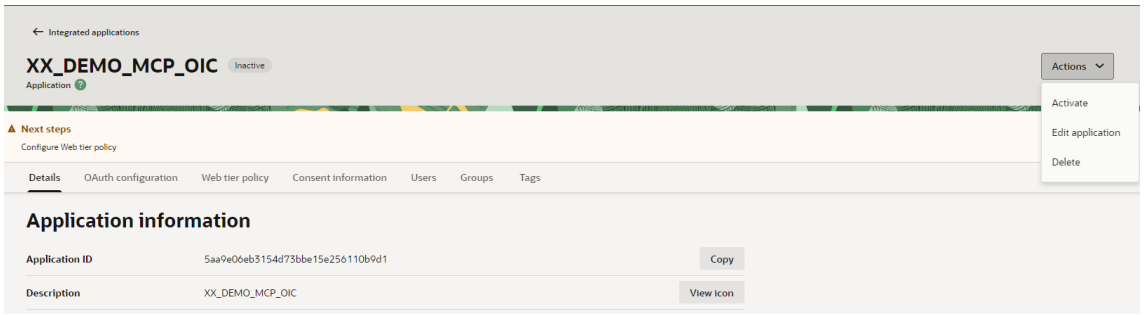
Add your application.

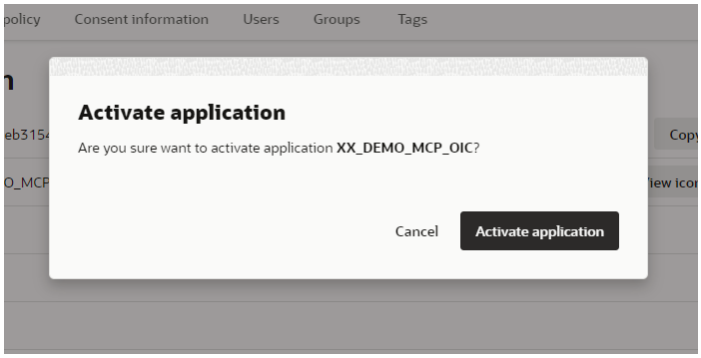


After the Application is created, you will have these details.



Click Activate (top right button)

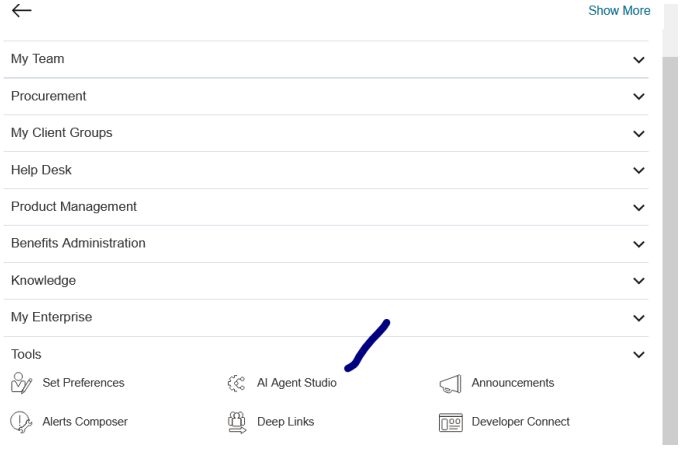




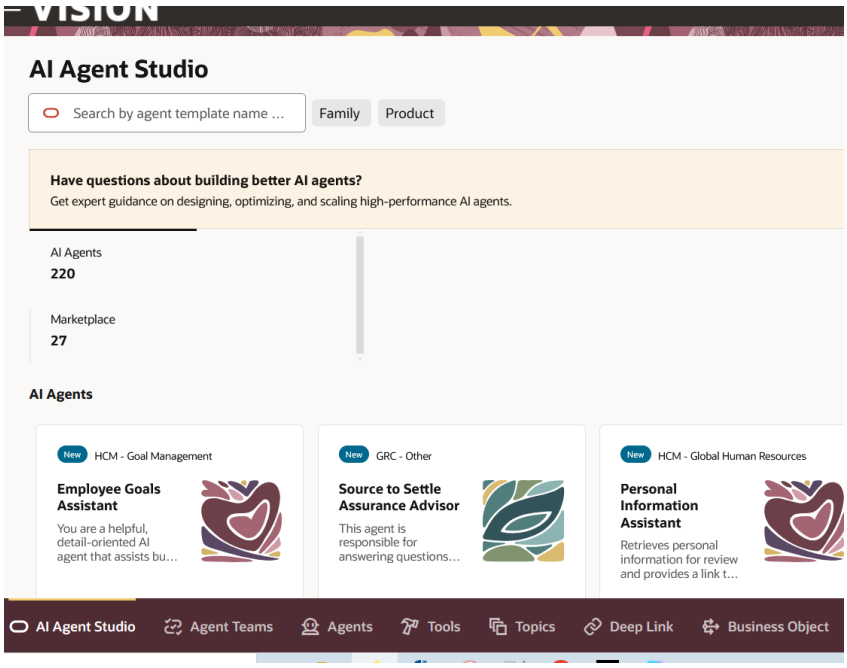
Part 3. MCP Tool in AI Agent Studio.

After login to SaaS.

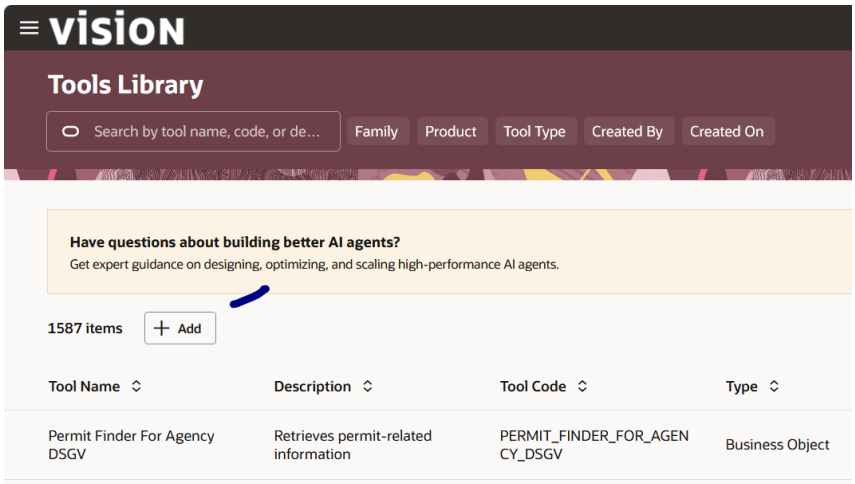
Menu-Tools-AI Agent Studio.

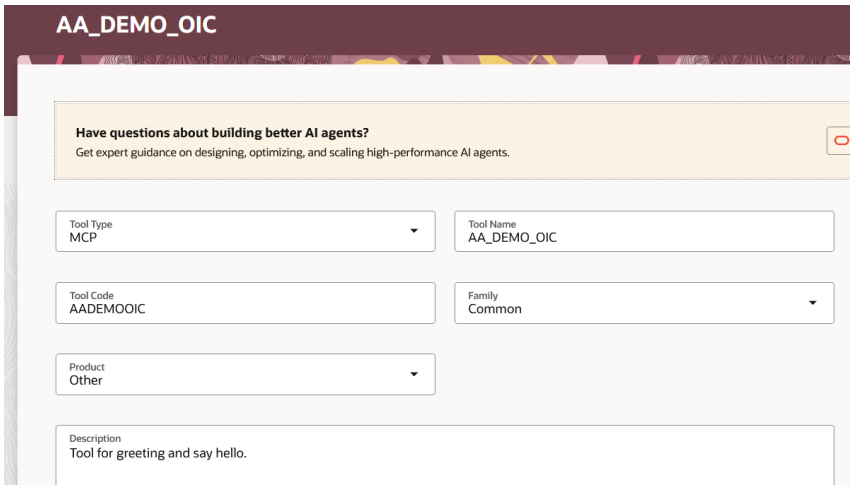


Navigate to Tools tab.

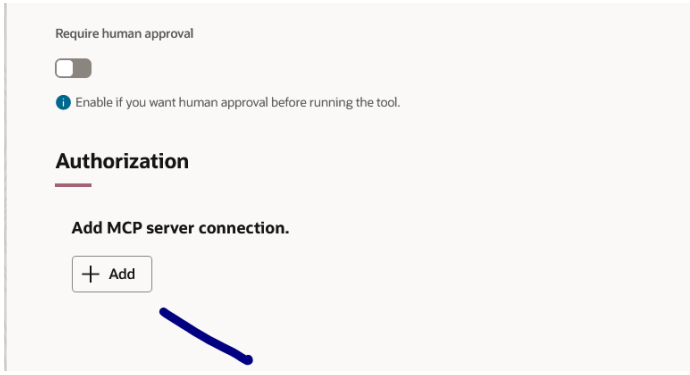


Add Tool.

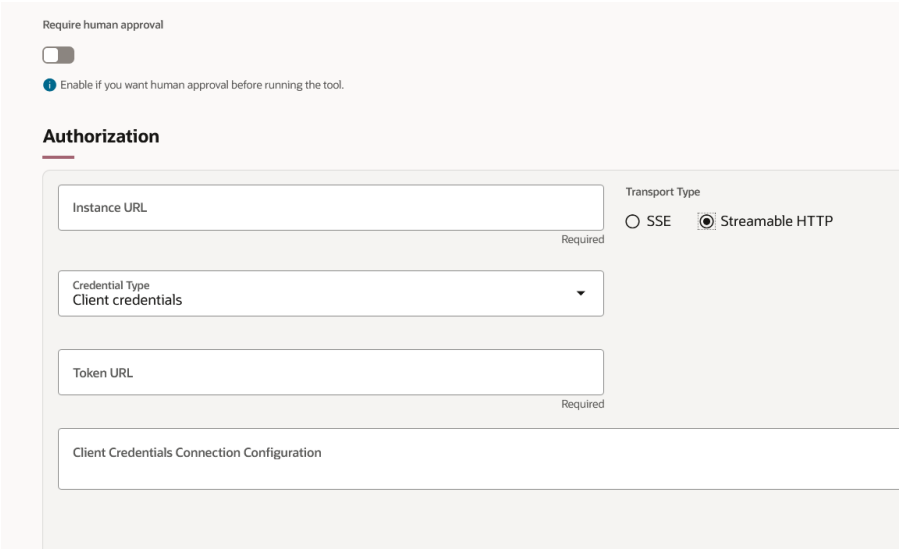




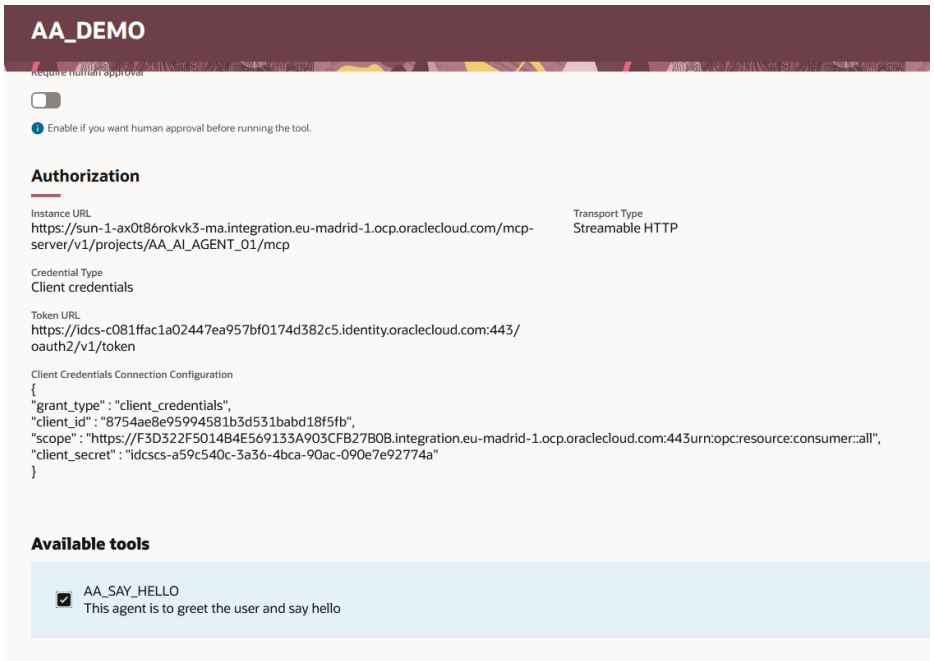
Click on Add MCP server connection.



This will show an empty new page.



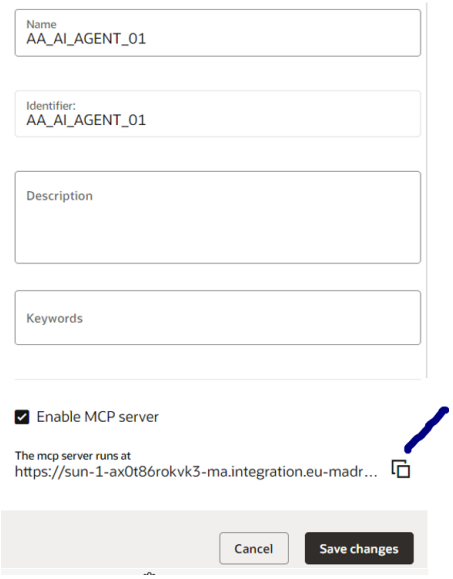
Here we show the page with our data.



Authorization detail.

- **Instance URL**

From here:

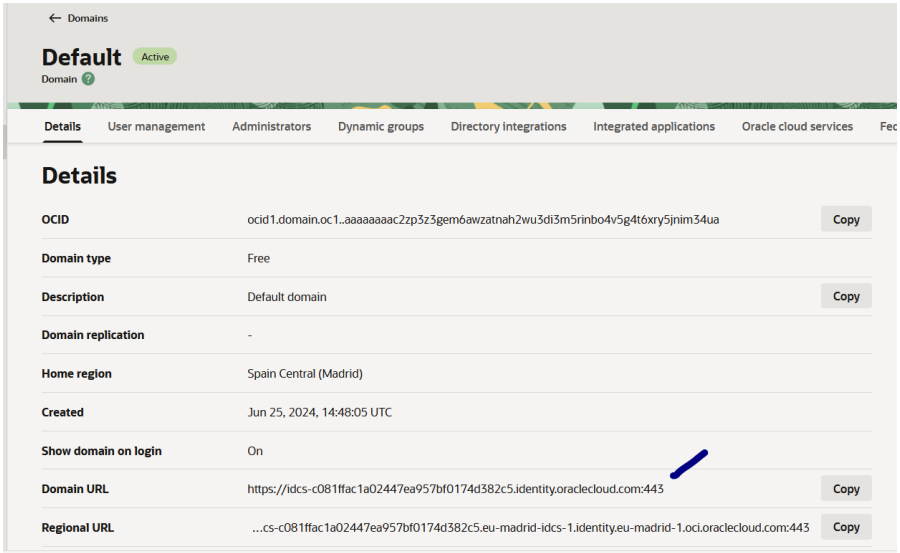


Example:

https://sun-1-ax0t86rokvk3-ma.integration.eu-madrid-1.ocp.oraclecloud.com/mcp-server/v1/projects/AA_AI_AGENT_01/mcp

- Transport Type: Streamable HTTP
- **Credential Type:** Client credentials
- Token URL.

Taken from here:



Then add suffix.

Example:

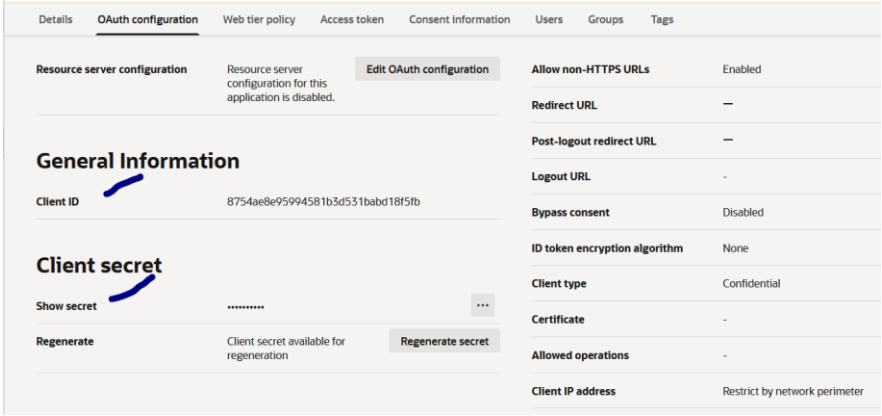
https://idcs-c081ffac1a02447ea957bf0174d382c5.identity.oraclecloud.com:443/oauth2/v1/token

- Client Credentials Connection Configuration.

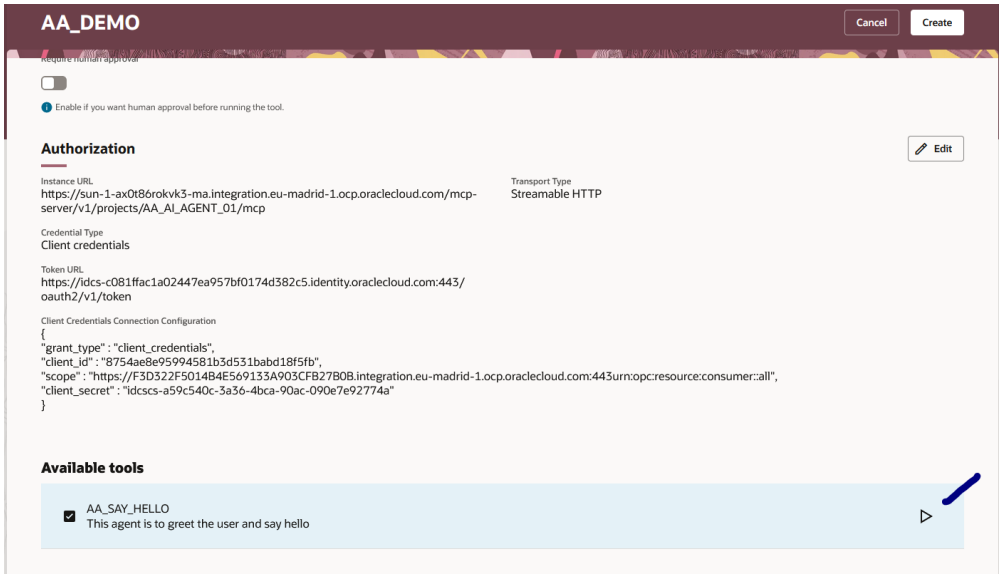
```
{
        "grant_type": "client_credentials",
        "client_id": "8754ae8e95994581b3d531babd18f5fb",
        "scope": "https://F3D322F5014B4E569133A903CFB27B0B.integration.eu-madrid-1.ocp.oraclecloud.com:443urn:opc:resource:consumer::all",
        "client_secret": "idcscs-a59c540c-3a36-4bca-90ac-090e7e92774a"
}
```

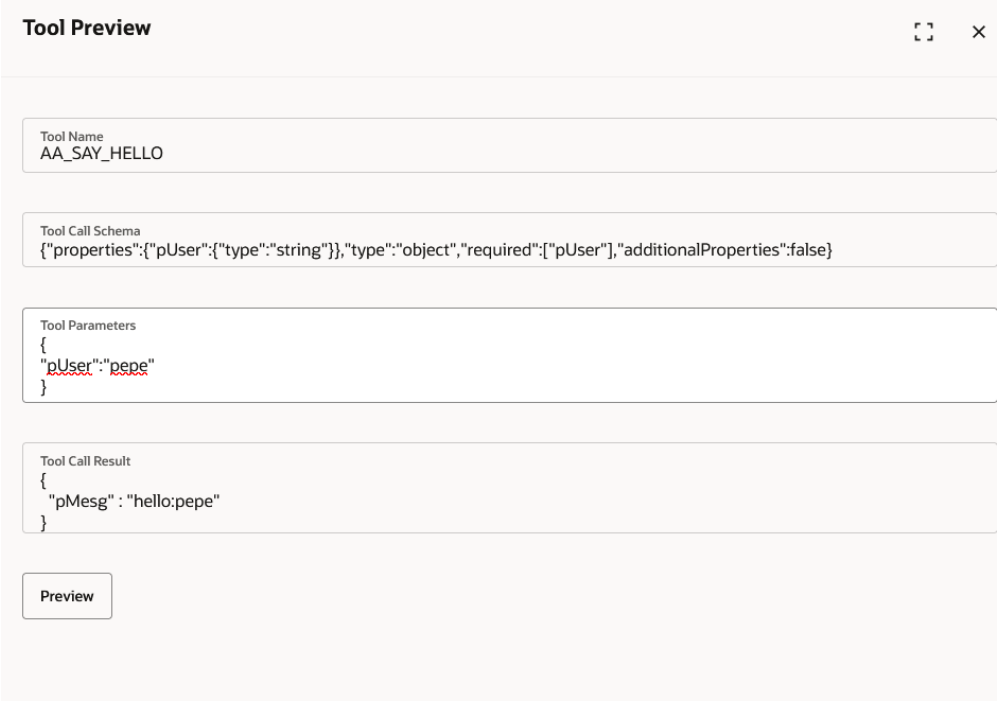
Scope taken from here:

And client_id and secret from here:



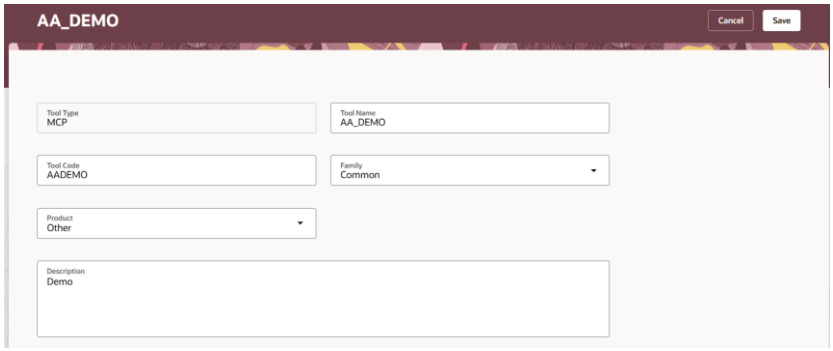
Test from Tool.

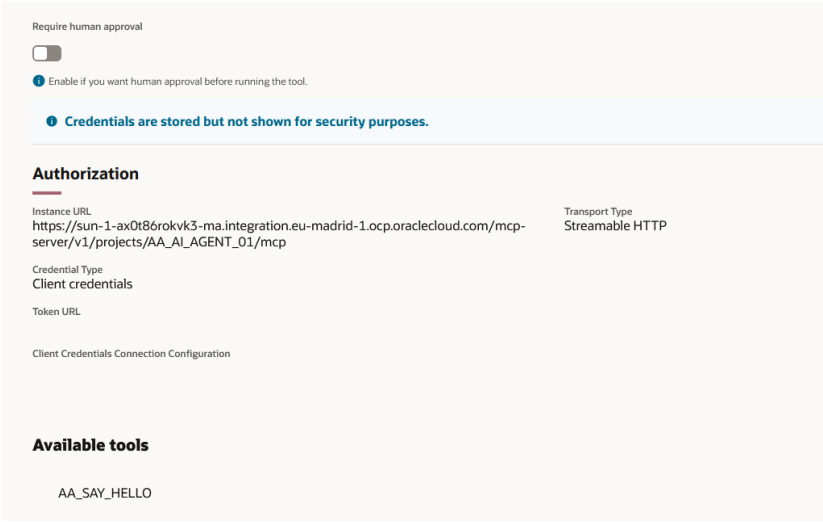




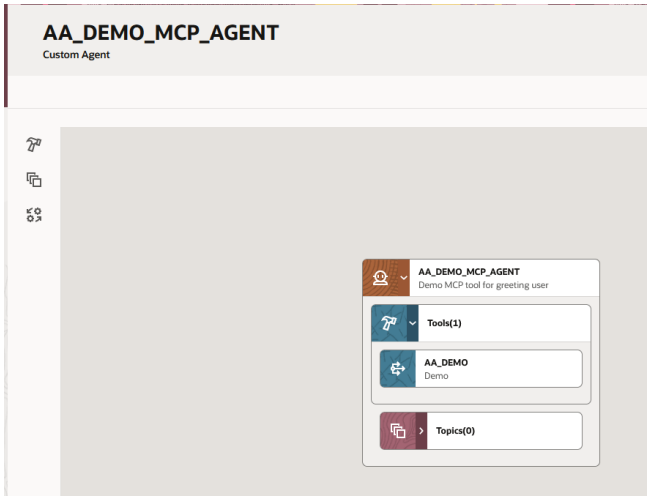
AI Agent Studio.

Create Tool.

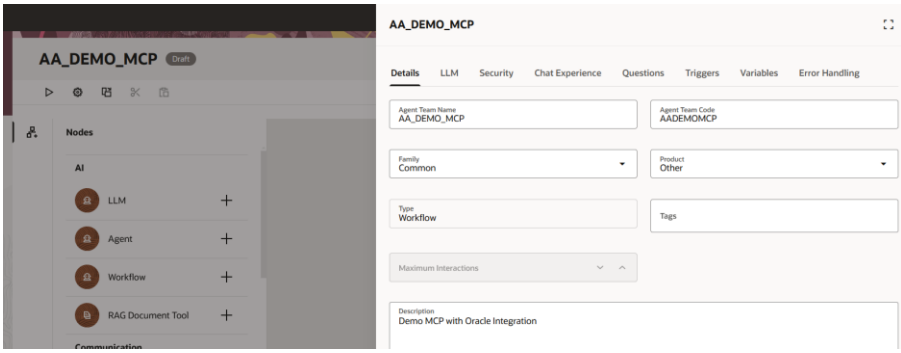




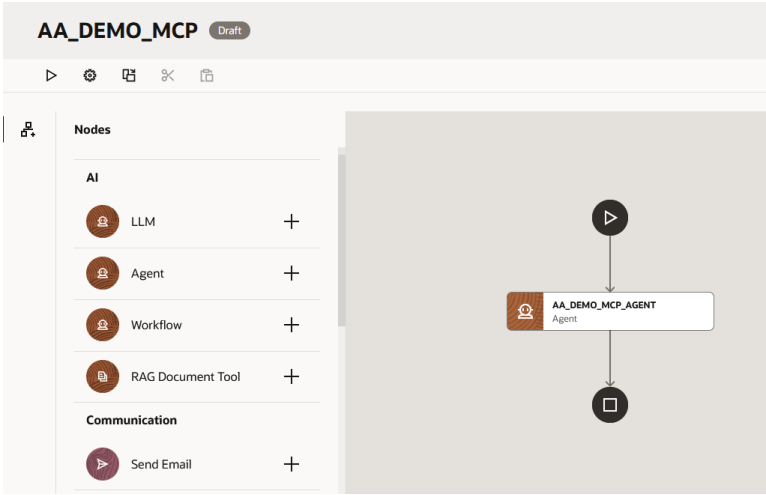
Then crate Agent.



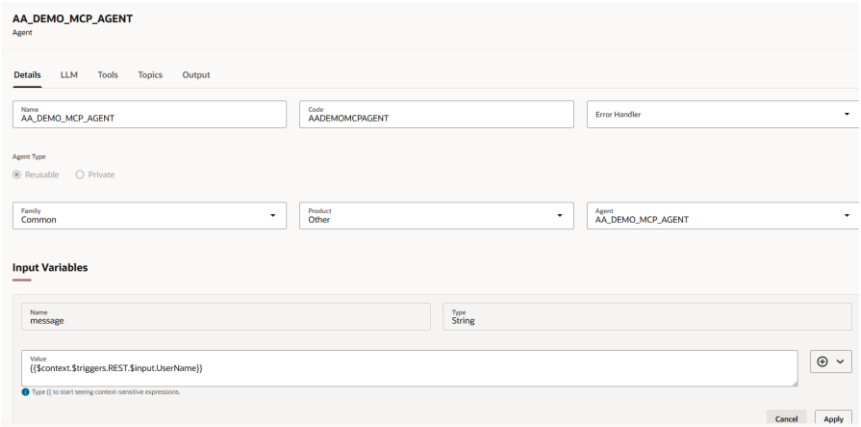
Then create Agent Team.



Add Agent previously created.

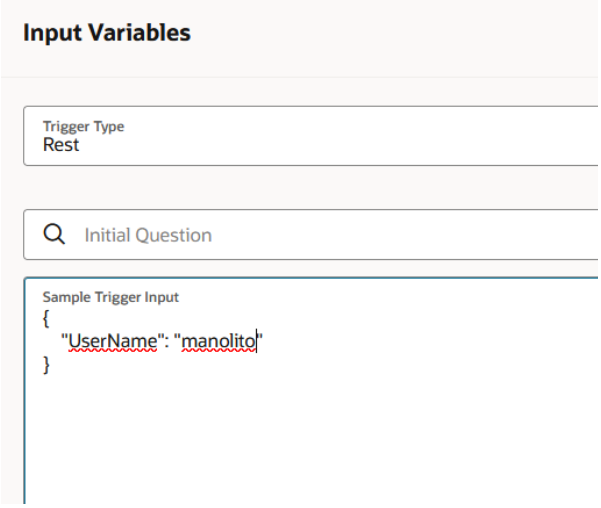


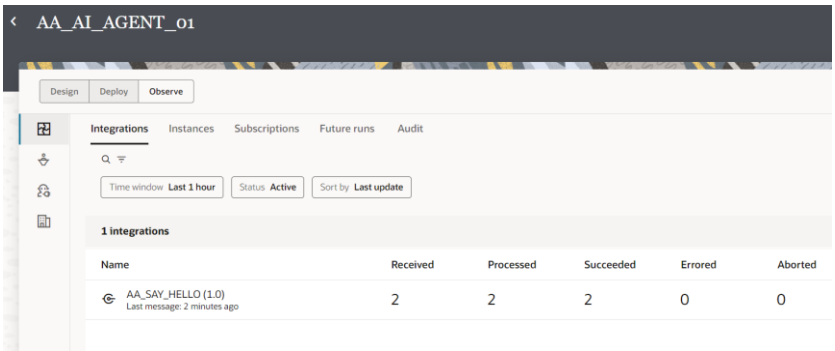
Assign value to parameter.

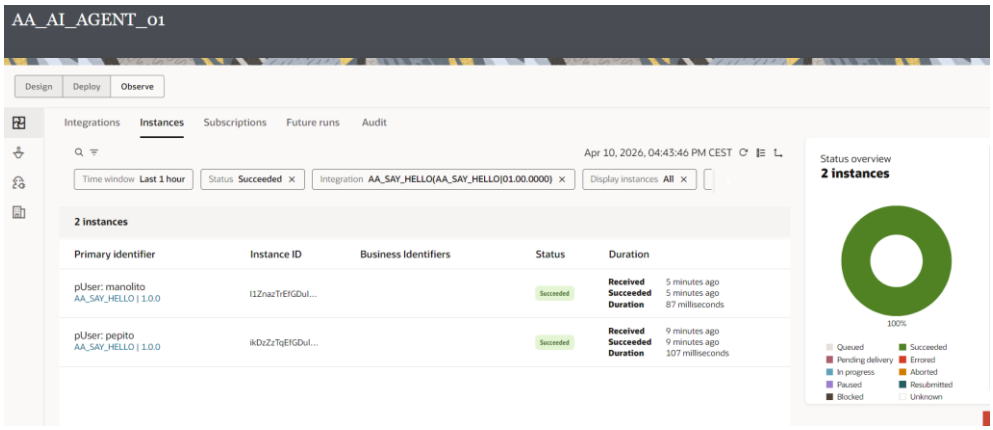


Test.

Here we run the dummy conversation to run actions in OIC and retrieve output from integration.







Conclusion.

We can work with OIC integrations with MCP configuration from AI Agent Studio.

Dummy example provided.

Feel free to build your integrations and connect to AI Agent Studio for more complex examples.

Technical

Code example	Comments
AA_AI_AGENT_01.car	OIC project containing dummy integration
AADEMOMCP.json	Agent team available to import in 26A+ instances.
